

The MEAS KPSI 700 is a submersible hydrostatic level transducer specifically designed to meet the rigorous environments encountered in liquid level measurement and control. It can be configured to perform to specifications under most adverse, reactive conditions.

All MEAS KPSI Transducers utilize a highly accurate pressure sensor assembly specifically designed for hostile fluids and gases. The assembly is integrated with supporting electronics in a durable waterproof housing constructed of 316 stainless steel or titanium. The attached electrical cable is custom manufactured and includes Kevlar® members to prevent errors due to cable elongation, and a unique water block feature that self-seals in the event of accidental cuts to the cable. Each transducer is shipped with a SuperDry<sup>™</sup> Vent Filter that prevents moisture from entering the vent tube for at least one year without maintenance, even in the most humid environments.

# **ORDERING INFORMATION**

The part number requires two level range limits, corresponding to the maximum and minimum analog outputs of the transducer, to be specified in **pounds per square inch (psi)** to three decimal places. The lower level range is typically 000.000 unless otherwise required. For reverse output requirements, enter the lower level range for the maximum output signal and the upper range for the minimum output. Use the following conversion factors:

ft H<sub>2</sub>O / 2.3073 = psi Examples: 1 m H<sub>2</sub>O / 0.703265 = psi 1

Examples: 10 ft H<sub>2</sub>O / 2.3073 = 4.334 psi 10m H<sub>2</sub>O / 0.703265 = 14.219 psi (enter 004.334 in the part number) (enter 014.219 in the part number)

For sealed gage reference add local atmosphere when converting to psi. Contact PSI for assistance. Example: 10 ft H<sub>2</sub>O / 2.3073 +14.7 = 19.034 psi Units of measure on standard PSI label. Contact PSI if private labeling is required.
